

Dexterra Achieves IBM SOA Specialty Partner Status *Dexterra a Platinum Sponsor at IBM Impact*

Orlando, FLA – May 24, 2007 – Dexterra, Inc., the fastest-growing mobile solutions company worldwide, today announced its acceptance to the IBM SOA Specialty after successfully completing IBM's rigorous SOA technical and business requirements. With this achievement, Dexterra Concert™ has been validated to integrate with the IBM software and strategy for SOA, which includes the industry-leading WebSphere Application Server and WebSphere Process Server with integration capabilities to help enterprises accelerate IT response to business change. Dexterra is also a Platinum Sponsor at IBM IMPACT 2007, taking place this week in Orlando.

“SOA is an increasingly important business requirement for organizations because of the business flexibility it enables,” said Sandy Carter, vice president, SOA and WebSphere, IBM Software Group. “Dexterra’s commitment to SOA provides their customers with a powerful way to reduce integration costs while rapidly deploying mobile enterprise applications that increase the productivity of their mobile workforce.”

An important factor in Dexterra’s SOA specialty partner validation is that Dexterra and IBM together recently won one of the largest mobile business software contracts in the wireless industry. In addition, the two companies are providing a mobile solution for one of the largest construction industry companies in the US, which will supply more than 10,000 field workers and 9,000 vehicles with Dexterra mobile applications on IBM SOA services.

The Dexterra Concert platform, Dexterra’s flagship product, is integrated with WebSphere Application Server and WebSphere Process Server. Dexterra Concert enables companies to assemble tailored solutions that can be adapted and evolved as business needs change, using industry standard-based toolsets for both Windows and Java environments. Supporting field service, field sales, asset management, and workforce management, Dexterra’s suite of industry-specific solutions easily adapts to business process changes, supports the largest selection of wireless and mobile devices, and integrates with the greatest number of enterprise back-office systems – all without disrupting companies’ existing IT environments.

Dexterra's composite-based application framework incorporates best-in-class mobile business processes that can be assembled and customized to create functionality that meets an organization's unique needs. The ability to rapidly deploy, customize and change capabilities as needed is one of the central benefits of SOA-certified software.

"Organizations are demanding mobile solutions that are adaptable, easy to deploy, fast to implement and achieve a quick ROI," said Rob Loughan, Chairman and CEO of Dexterra. "Dexterra's IBM Specialty status provides IBM WebSphere customers reassurance that they will gain the competitive advantage that result from adopting The Mobile Way of Business™."

Dexterra was recently recognized by two of the leading IT analyst firms, IDC and Gartner, as a leader in the mobile enterprise application market. In addition, the company has shown significant momentum in customer adoption of Dexterra tools and applications. It now serves three of the four largest telecommunications companies, and most of the Life Sciences companies in the world.

IBM IMPACT 2007 in Orlando, Florida provides business partners and customers with the opportunity to understand they can embrace the WebSphere Platform for SOA to establish a flexible IT foundation that can respond quickly to today's changing business climate and achieve innovation.
